

# Taller 4: Redes Neuronales

Josep Pérez Segura

Natalia Sanjosé Ortega

Emilio Sánchez Martínez

# Ejemplos de graficas de entrenamiento:

# Resultado en test competición para el mejor modelo:

- El mejor modelo con respecto al MAE es el de entrada 10 y salida 90 días con un MAE de 0.001262

| Ventana salida \ Ventana entradas | 1d       | 5d       | 30d      | 90d      |
|-----------------------------------|----------|----------|----------|----------|
| 5d                                | 0.012243 | 0.005581 | 0.002319 | 0.001263 |
| 10d                               | 0.012244 | 0.005580 | 0.002319 | 0.001262 |
| 30d                               | 0.012251 | 0.005578 | 0.002319 | 0.001264 |
| 90d                               | 0.012271 | 0.005589 | 0.002320 | 0.001268 |

# Modelos útiles por ventanas

# Investigación

Técnicas usadas:

- Diferenciación fraccional
- Denoising Marchenko-Pastur

| Ventana salidas \<br>Ventana entradas | 1d       | 5d       | 30d      | 90d      |
